

MANEESH JUNEJA

Digital Health Futurist

Maneesh Juneja is a global health expert who explores the convergence of emerging technologies to see how they can make the world a healthier and happier place.

Juneja's research extends beyond understanding technology, it also include economic, political and cultural trends. In 2017, some of the topics he examined were new models of care, digital biomarkers, and our relationship with machines as they become more intelligent.

Juneja's thinking led him to TEDx Saint Peter Port, where he spoke about how Digital Health technologies could be used to make Guernsey the best place to live on the planet. In 2013, he gave another acclaimed talk at TEDx Porto, this time on his vision of 7 billion Citizen Scientists. He also participated at "FutureMed" at Singularity University, in Silicon Valley.

In 2012, Juneja left GlaxoSmithKline, to set up his own health consultancy, and in the same year also founded the Health 2.0 London Chapter, which he grew into the UK's largest grassroots health tech community.

In a career spanning 20 years, Juneja has worked with data to improve decision-making across a number of industries. From supporting the UK Government study at University College London, managing the Tesco database at DunnHumby, and most recently, working with the world's largest U.S. health insurance claims and European EHR databases at GSK R&D.
